- All Organisations that contributed data and reports
Objective

To map existing services and programs related to HIV and STI prevention, care and support for men who have sex with men in order to identify program and service gaps in Indonesia.
We based the research on:

• The 2004 Indonesian National Congress on Male Sexual Health
• The Minimum Package of Services for Men Who Have Sex with Men (under development for the Greater Mekong - Thailand, Viet Nam, Cambodia, Laos - Region)
Why are MSM particularly vulnerable to HIV infection?

Many MSM have:

- Unsafe sex behaviour
- Frequent changes of sex partners or multipartner sex, bisexual behaviour
- Use drugs
HIV/AIDS STATISTIC IN INDONESIA
WITHIN THE LAST 10 YEARS

North Sulawesi (Manado) 34%
South Sulawesi (Makassar) 38%
COVERAGE PROGRAM COMPARE WITH NATIONAL ESTIMATION POPULATION

Men Who Have Sex With Men (National, Mid-Range Estimate)

Accessed by Services (Upper Estimate)

- Open / Identifiable
- Hidden
- Accessed by services

- 300,000
- 1,000,000
- 25,904
Health Services For MSM are Very Limited and Poor

- insufficient attention to male sexual health
- no male sexual health clinics
- men frequently self treat
Needs found

- Stronger and more solid networking among MSM Organizations in Indonesia
- Clear direction for HIV/AIDS prevention programs for MSM nationally
- Improved resources including finance and technical skills
Needs Found

- Increase the capacity of MSM organisations so they can develop programs and funding proposals
- Establish a data base and information centre of MSM organisations and their programs
What is the Function of National Network?

- Help respond organisations by:
  - Enhancing sharing and communication among organisations
  - Providing technical and programming support to member organisations
Thank You
